

- Automatically track the visual liquid level, level by level and section by section from top to bottom, and discharge water quantitatively;
- The leather bag replaces the traditional metal shrapnel, with higher lifting efficiency;
- Cordless logging to monitor the vertical pipe flow state of the wellbore;
- It is easy to manage and can be unattended;
- Intelligent collection and establishment of block pressure big data platform.

Service Performance

- It has been successfully tested in several oil and gas blocks in Qinghai, Ordos and Sichuan Basin. Among them, a block in the Ordos has been operated continuously without fault for three months, with a cumulative increase of 650000m³.
