

Internal and External Anti-corrosion Technology Service for Storage Tanks

The Internal and External Anti-corrosion Technology Service for Storage Tanks is to isolate various corrosive media from the storage tank body and improve the service life of the storage tank. The anti-corrosion coating is resistant to corrosive acids and alkalis, boiled water, organic solvents and various oils. It is one of the effective means to prolong the service life of storage tank and reduce cost.

Technical Feature

- Series of self-developed coating products based on customer needs.
- Strong adhesion to metals and strong resistance of the penetration and stripping of water and other ions.
- Long service life in severely eroded environments due to high surface hardness and toughness.
- 3 domestic patents.

Service Scope

- Mud tank
- Gas Storage Tank
- Oil storage tank
- Water storage tank

Qualification

- China's Anti-corrosion Construction Qualification (Grade I) and Safety Qualification.
- 10 employees including 2 intermediate technicians, and 2 anti-corrosion professional teams.
- 8 sets of portable professional equipment.

Service Performance

- 3000 m² gas storage tank of Southwest Oil and Gas Field.
