

Introduction of Hermetic Seal Detection Branch

The Hermetic Seal Detection Branch, affiliated to T-ALL Inspection Group, is a leading technology service provider about hermetic seal detection in China. It has exclusive inspection technologies authorized by patents. It is also the initiator and the leader of hermetic seal detection technology in China.

- In 2008, hermetic seal detection division and service base were established in Korla, Xinjiang.
- In 2009, two project departments were established in Xinjiang and Sichuan separately, and the southwest service base was established.
- In 2010, the Hermetic Seal Detection Branch was established and three project departments were founded in Xinjiang, Sichuan and Jilin, respectively. The northeast service base was established.
- In 2012, two more service bases were established in Tianjin and Uxin Banner, respectively.
- Up to now, the Hermetic Seal Detection Branch has 150 employees, 12 detection teams and 23 sets of facilities.

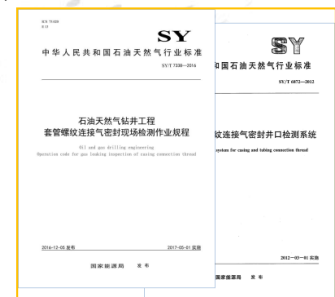

Since establishment, the Hermetic Seal Detection Branch has been continuously committed to technological progress. It is supported by a powerful expert team and a strict management system of safety and quality. 34 authorized patents help to form an intellectual property rights system. It drafts national standards. The safety and reliability of facility and technology has passed DET NORSKE VERITAS assessment (Report No. 80556000). Its ultra-high pressure vessel has earned China Special Equipment Use Certification (CNT-130).
