

## Pigging Operations

Pigging operations can remove harmful substances in oil and gas pipelines and ensure safe and stable operation of pipelines. According to the different needs of pipeline owners, pigging operations, diameter measurement, pressure test, drying of new pipelines (section / whole), regular pigging of existing pipelines, deep pigging before internal inspection and other direct services can be provided.

### Technical Feature

- Automatic pressure relief jet pig
  - Suitable for small diameter, waxy high definition pigging operation
  - Pressure will be released automatically and wax column will be blown away, when the ball stops
- Pressure remote transmission system
  - Suitable for any pipeline
  - Wireless transmission,
  - Collect the pressure values of monitoring points continuously, accurately and automatically
- Transmitter
  - Has high pulse intensity, long transmitting distance and stable pulse signal
  - Long working time, suitable for long distance, low speed, high probability of stopping operation
- Intelligent remote receiver
  - Has high-speed mode and can pick up pig transmitter signal less than 15m / s
  - Using ordinary alkaline battery, long standby time (more than 200 hours)
  - Can be fixed for a long time and is especially suitable for pipelines with periodic pigging operation

### Service Scope

- Suitable for long distance pipeline, process pipeline and gas gathering pipeline

### Qualification

- 8 sets of professional pigging equipment
- A professional construction team with many years of working experience

### Service Performance

- Service market covers: Tarim Oilfield, Southwest Oil and Gas Field, West Pipeline, West-East Gas Pipeline, Southwest Pipeline, etc.
- 10 years serving experience in the industry
- Cumulative detection and evaluation of pipelines exceeding 20,000 kilometers
