

Natural gas recovery

Technology brief

Anton provides complete sets of equipment and operation services for oilfield gas, coalbed methane, biogas and scattered gas recovery. Provide customers with efficient and intelligent overall solutions. The standardized complete set of skid-mounted LNG installations based on MRC refrigeration technology has achieved a truly movable integrated skid-mounted device. Specialized customization can be realized according to the different needs of customers, and the scale of skid-mounted processing can be flexibly adjusted to meet the processing needs of 10,000 m³ to 2 million m³/day.)

Technical characteristics

- 1.Movable modular skid-mounted design, convenient installation ;
- 2.DCS automatic control system, seamless connection SIS, high automation device
- 3.Customize the processing scale plan
- 4.Two stage refrigeration natural gas liquefaction technology, lower energy consumption

Technical advantages

- 1.Complete assembly technology in the workshop, flexible relocation, less on-site construction
- 2.The recovery of raw gas saves energy consumption by 15% at the same gas composition and flow rate
