

## Precision Geological Engineering Technical Services

Anton provides "geology-oriented" and "visualization" precise geological engineering services based on reservoir geology for drilling, completion, stimulation and oil recovery engineering to improve oil and gas development efficiency.

### Service Advantages

1. Professional and international geological technology service team.
2. Advanced drilling, stimulation, production monitoring technology and equipment.
3. Effective integration of geological simulation and real-time monitoring technology to achieve precision geological engineering.
4. Rich experience in geological engineering services.

### Service Performance

A wide range of precision geological engineering services have been carried out by Anton, involving sandstone, carbonate reservoirs, shale gas, coalbed methane, in China, the Middle East and Central Asia.

1. Implementation plan optimization, real-time tracking and comprehensive effect evaluation of shale gas wells in Changning.
2. Shale gas precise fracturing control service in Changning.
3. Analysis of geomechanics and wellbore stability of BZ key well in Tarim Oilfield
4. Geological Engineering Design and Tracking Implementation of Side Drilling in Yan Gas Field.
5. Fracturing and stimulation services for horizontal wells in Iraq limestone oil field.
6. Risk bearing stimulation service for B Oilfield in Pakistan.
7. Comprehensive geological research and development and production support for Chad O Oilfield.
